SUMMARY

Senior software engineer building Go services and leading frontend delivery for commerce products. At McGraw Hill, I develop the offer-pricing service for the EDOMS platform and led its frontend work to deliver the first MVP two weeks early. Earlier at BTG Pactual, I moved Java risk services to Go and cut memory use by 40%. My full-stack work spans React, TypeScript, and PostgreSQL, and I use GitHub Copilot and Claude in development.

SKILLS

Languages	Go, TypeScript, JavaScript, SQL, Java
Backend	REST, Microservices, Event-driven architecture, Clean Architecture, Domain-Driven Design, gRPC
Frontend	React, Next.js, Angular
Data	PostgreSQL, Redis, MongoDB, Elasticsearch
Cloud & DevOps	AWS, Docker, Kubernetes, Terraform, GitHub Actions
AI Tooling	GitHub Copilot, Claude Code
Messaging	NATS, RabbitMQ, ActiveMQ, Redis Streams
Observability	Datadog, New Relic, Grafana, Kibana
Testing	Go testing, JUnit, Mockito

EXPERIENCE

McGraw Hill

Jul 2024 - Present

Senior Software Engineer · Remote (New York, US)

- Develop the offer-pricing service for the EDOMS commerce platform, implementing Dynamic Offers in Go on AWS.
- Led the EDOMS frontend work and delivered its first MVP two weeks ahead of schedule.
- Set Go patterns and reviewed code for the EDOMS team, becoming its reference for Go development.
- Integrate the pricing service with other McGraw Hill systems.

BTG Pactual

Oct 2022 - Jul 2024

Senior Software Engineer · São Paulo, Brazil

- Migrated legacy Java risk services to Go APIs, cutting memory footprint 40% and shortening startup time.
- Built the risk-calculation and transaction-limit checks behind client trading limits, working with risk and compliance teams to stay inside regulation.
- Wrote a library to move data from Redis Streams to RabbitMQ queues, dropping Redis memory use 40% and the cost tied to it.
- Coordinated tested releases of risk services and fixes, shipping updates on schedule.

Betha Sistemas

Jun 2020 - Oct 2022

Full Stack Software Engineer · Criciúma, Brazil

- Built and shipped full-stack features for a public-sector HR platform, delivering 20+ features on schedule.
- Designed REST APIs and backend services in Java and Spring using PostgreSQL, MongoDB, and ActiveMQ.
- Paired with engineers on debugging and reviews, and supported junior developers through production incidents.

EDUCATION

Faculdade Brasília · Postgraduate Degree, Go — Jan 2024 - Aug 2024

SATC · B.Sc. Computer Engineering — 2019 - 2023
